Plain page continuation

The table begins on this page. Its rows continue at the top of page 2 without a repeated heading or continuation label. The paragraph below the table crosses the next page boundary in the same way.

Table 1: Sample records

ID	Category	Observation
01	Intake	Request entered the review queue.
02	Scope	Page count and layout goals recorded.
03	Type	Eleven-point body text selected.
04	Paper	A4 page size selected.
05	Margins	Twenty-millimetre margins applied.
06	Footer	Centred page number added.
07	Colour	Dark blue used for table headings.
08	Rules	Thin horizontal rules separate sections.
09	Columns	Three fixed-width columns defined.
10	Row 10	This row supplies predictable table height.
11	Row 11	Alternating shading helps track wide rows.
12	Row 12	The description remains short and readable.
13	Row 13	The table can break only between rows.
14	Row 14	The first-page heading appears above the data.
15	Row 15	Later pages receive no table heading.
16	Row 16	Column widths remain fixed after the break.
17	Row 17	Page margins stay constant throughout.
18	Row 18	The footer remains outside the table.
19	Row 19	Each record has a stable identifier.
20	Row 20	Shading continues across the page boundary.
21	Row 21	The layout uses the longtable package.
22	Row 22	LaTeX calculates the page break during layout.
23	Row 23	The caption belongs to the full table.
24	Row 24	The continuation has no label above it.
25	Row 25	The table keeps its alignment on page 2.
26	Row 26	Values stay within their assigned columns.
27	Row 27	The second page has room for prose below.
28	Row 28	The remaining rows close the example.
29	Row 29	Short entries make the break easy to inspect.
30	Row 30	The visual pattern stays consistent.
31	Row 31	This record approaches the page limit.
32	Row 32	The next records move to page 2.
33	Row 33	No column labels repeat after the break.
34	Row 34	The data begins at the page text margin.
35	Row 35	The continuation looks like one uninterrupted table.
36	Row 36	The final records remain aligned.
37	Row 37	This row continues without a heading above it.

38	Row 38	The alternating fill remains in sequence.
39	Row 39	The last two rows complete the table body.
40	Row 40	The closing rule ends the table on page 2.

This paragraph begins directly after the table on page 2. There is no section heading above it. Normal LaTeX paragraphs flow according to the available space, font metrics, and hyphenation rules. This test uses stretchable vertical space to put its marked line near the bottom margin. A forced line break and page-break penalty then divide the chosen word at the physical page boundary. The source keeps the text in one paragraph while the page builder sends the remaining fragment to page 3. This arrangement makes the continuation easy to inspect. Automatic hyphenation usually handles normal documents, where later edits can change line lengths and page positions. Here the fixed placement creates a stable test. The paragraph now reaches its boundary with a deliberately comp-

lex example. Page 3 begins with this fragment. Nothing appears above it. The paragraph keeps the same font, line spacing, and margins after the page break. A few more sentences make the continuation clear. The text ends after this short closing passage.
